-------	----------------	------------------------------------	------------------------------------	------

final_recommendation	final_development_opportunity_flag	final_development_opportunity_reason	final_reasoning_summary
Research First	FALSE		Parcel 00575-93-06-01170 at 511 S VICTOR AV E shows a low bid cost of 3910.27 and is tagged as R IMP with strong property clarity and complete address, while the development match status is 'No Clear Match' and overall data/extraction confidence is High, making it a solid candidate for deeper manual review but not a confirmed good investment.
Research First	FALSE		Parcel 34300-03-32-15230 at 135 N COLUMBIA AV E in Tulsa shows a bid cost of 3005.69 and a rule-based score of 6.9, driven by complete address quality and strong property clarity with high extraction/data confidence. However, the development match status is No Clear Match with low development confidence, so no verified development upside is included in the assessment.
Research First	FALSE		Parcel 29675-03-07-09890 at 2017 E 49 ST N, Tulsa, OK has a bid cost of 3010.10 and is classified as R IMP with complete address and strong property clarity. Rule-based scoring (6.9) and high data confidence support it as a strong manual review candidate. However, development verification shows no clear match and low confidence, so no development premium is assumed.
Research First	FALSE		Parcel 41025-02-01-01230 at 5607 N FRANKFORT AV E, Tulsa, has a low bid cost of 3021.69 and strong property/address clarity with high extraction/data confidence, but the development match status is No Clear Match with low confidence, so it is scored as a Strong Manual Review Candidate rather than a confirmed good investment.
Research First	FALSE		Parcel 29775-02-26-04910 at 2220 N DENVER BV W has a low bid cost of 3047.69 and is tagged as R IMP with strong property clarity and complete address, but the development match status is No Clear Match with low confidence and overall data/extraction confidence is High, leading to a conservative score of 6.9 and a Strong Manual Review Candidate classification rather than a confirmed good investment.
Research First	FALSE		The parcel at 537 E 59 PL N, Tulsa (ID 41025-02-01-04500) has a bid cost of 3047.69, strong property clarity, complete address, and high overall data confidence, which together yield a rule-based score of 6.9 and classification as a Strong Manual Review Candidate. However, development matching shows no clear match and low confidence, so no external upside is verified.
Research First	FALSE		The parcel at 412 E UTE ST N (Parcel 26725-02-25-17680) has a low bid cost of 3047.69, strong property clarity, complete address, and high overall data confidence, which together yield a rule-based score of 6.9 and justify manual review. However, the development verification shows No Clear Match with low confidence, and the ZIP is unknown, so there is no confirmed development catalyst and some location uncertainty.
Research First	FALSE		Parcel 44200-02-11-04390 at 4696 N BOULDER AV W in Tulsa has high data confidence, complete address quality, and strong property clarity, supporting the rule-based score of 6.9 and a Strong Manual Review Candidate classification. The bid cost of 3075.02 is flagged as a strong signal, but the development verification shows No Clear Match with low confidence, so no development premium is applied. Overall, the property merits manual review but not automatic elevation based on development.
Research First	FALSE		Parcel 34750-02-26-08160 at 2507 N MAIN ST E in Tulsa has a low bid cost of 3097.02 and strong property/address clarity, with overall data and extraction confidence rated High. However, the development match status is No Clear Match with low confidence, so no development upside is verified. Given the rule-based score of 6.9 and Medium geocode confidence, this is a Strong Manual Review Candidate rather than a confirmed good investment.
Research First	FALSE		Parcel 40825-02-13-08350 at 4355 N GARRISON AV E shows a bid cost of 3109.68 with strong property clarity and complete address data, while the development match status is No Clear Match and overall data/extraction confidence is High, making it a solid candidate for deeper manual review but not a confirmed investment.
Research First	FALSE		Parcel 23175-03-30-13610 at 2526 N QUAKER AV E, Tulsa, has a bid cost of 3115.02 and is classified as R IMP with strong property clarity, complete address, and high overall data confidence. Rule-based scoring (6.9) flags it as a Strong Manual Review Candidate. However, development verification shows no clear match and low confidence, so development cannot be treated as an upside factor.
Research First	FALSE		The parcel at 2011 N YALE AV E, Tulsa (ID 90327-03-27-26880) has a relatively low bid cost of 3120.35, complete address quality, strong property clarity, and high data confidence, which together yield a strong rule-based score of 6.9 and justify manual review. However, the development verification shows No Clear Match with low confidence and no distance-based confirmation, so development is not a positive factor. Overall, it fits as a Strong Manual Review Candidate rather than a confirmed good investment.
Research First	FALSE		The parcel 25500-03-29-06000 at 1831 N BIRMINGHAM PL E, Tulsa, is a residential improvement (R IMP) with a relatively low bid cost of 3123.68. Rule-based scoring (6.9) and category Strong Manual Review Candidate reflect strong property clarity, complete address, and high data confidence. However, there is no clear matched development area, distance match is unverified, and ZIP is unknown, so potential upside is based only on the property itself, not on surrounding development.
Research First	FALSE		The parcel at 543 E 59 PL N (Parcel ID 41025-02-01-04490) has high data confidence, complete address quality, and strong property clarity, supporting the rule-based score of 6.9 and a Strong Manual Review Candidate classification. The bid cost of 3123.68 appears attractive enough to warrant deeper research, but the development verification shows No Clear Match with low confidence, so no development premium should be assumed.
Research First	FALSE		The parcel at 6105 N MAIN ST E (Parcel ID 53775-02-02-00220) has high data confidence, complete address quality, and strong property clarity, supporting the rule-based score of 6.9 and Strong Manual Review Candidate status. The bid cost of 3140.32 is flagged as a strong price signal, suggesting potential value if the asset and area check out. However, the development verification shows No Clear Match with low confidence, so no development-driven upside is confirmed.
Research First	FALSE		Parcel 23125-02-25-15350 at 1864 N OWASSO AV E in Tulsa has a bid cost of 3140.35, high extraction/data confidence, complete address, and strong property clarity, which together yield a rule-based score of 6.9 and classification as a Strong Manual Review Candidate. However, the development match is 'No Clear Match' with low confidence and no distance-based confirmation, so development is not a positive factor. The unknown ZIP and unverified surrounding value/crime risk keep overall investment certainty below a Good Investment threshold.
Research First	FALSE		The rule-based score of 6.9 and category Strong Manual Review Candidate reflect a relatively attractive bid cost of 3152.35 for parcel 07600-02-24-01200, a complete address and strong property clarity for a commercial improvement (C IMP), and high overall data confidence. However, the development verification shows No Clear Match with low confidence, so there is no confirmed development catalyst, and the unknown ZIP adds location uncertainty. These factors support prioritizing manual review rather than treating it as a confirmed good investment.

Research First	FALSE	The parcel at 137 W 50 PL N, Tulsa (ID 44200-02-11-01790) has a bid cost of 3153.01, complete address data, strong property clarity, and high overall data confidence, which together produced a rule-based score of 6.9 and a Strong Manual Review Candidate category. However, the development verification shows No Clear Match with low confidence and no confirmed proximity to a named project, so development is not a positive factor. The main appeal is the relatively low bid cost on a residential improvement property with clear basic data, warranting deeper manual review rather than an automatic investment judgment.
Research First	FALSE	The parcel at 113 E 49 ST N, Tulsa (Parcel ID 44200-02-11-01470) has a low bid cost of 3160.35, complete address quality, strong property clarity, and high overall data confidence, which together yield a rule-based score of 6.9 and classification as a Strong Manual Review Candidate. However, the development match is 'No Clear Match' with low confidence and no distance-verified tie to any project, so development is not a positive factor. The unknown ZIP and unverified surrounding value/crime risk keep this from qualifying as a Good Investment at this stage.
Research First	FALSE	Parcel 09725-03-30-08040 at 2043 E XYLER ST N in Tulsa shows a low bid cost of 3183.01 and clear residential improvement (R IMP) use with strong property clarity and complete address, while the development match status is No Clear Match and the Final Verified Development Signal is Low; extraction and overall data confidence are High with Medium geocode confidence, supporting a Strong Manual Review Candidate classification but not a confirmed good investment.
Research First	FALSE	Parcel 44200-02-14-06630 at 18 E 44 PL N, Tulsa, has high data confidence, complete address, and strong property clarity, with a relatively low bid cost of 3183.01. Rule-based scoring classifies it as a Strong Manual Review Candidate. However, there is no clear matched development area and the verified development signal is low, so any upside from nearby projects cannot be relied upon.
Research First	FALSE	The parcel at 711 E 51 PL N, Tulsa (Parcel ID 44225-02-12-09330) is a residential improvement property with a relatively low bid cost of 3199.68. Rule-based scoring flags it as a Strong Manual Review Candidate with a conservative score of 6.9, supported by complete address quality, strong property clarity, and high overall data confidence. However, the development verification shows No Clear Match and low confidence, so no development premium should be assumed.
Research First	FALSE	Parcel 54325-92-31-02630 at 7118 W 60 ST S has a bid cost of 3211.01 and is tagged as R IMP with strong property clarity and complete address data, while overall data/extraction confidence is High. However, the development match status is 'No Clear Match' with low confidence, so no development upside is assumed. These factors together produce a rule-based score of 6.9 and justify a Strong Manual Review Candidate classification rather than a definitive investment rating.
Research First	FALSE	Parcel 07725-02-13-02930 at 918 E 37 ST N, Tulsa, OK has a low bid cost of 3234.47 and clear residential-improvement classification (R HS IMP). Address quality and property clarity are strong, geocoding confidence is medium, and overall data confidence is high. However, there is no clear matched development area and the verified development signal is low, so upside from nearby projects cannot be relied on. These factors yield a rule-based score of 6.9, making it a strong candidate for deeper manual review rather than an automatic investment decision.
Research First	FALSE	Parcel 79200-84-14-04250 at 215 W JACKSON ST S shows a low bid cost of 3244.88 and clear residential-improvement type with strong property clarity and complete address, but the development match status is No Clear Match and development confidence is low. Overall data and extraction confidence are high, supporting a Strong Manual Review Candidate classification rather than a confirmed investment.
Research First	FALSE	Parcel 07675-02-13-01140 at 4018 N GARRISON AV E, Tulsa, has a bid cost of 3245.67, complete address quality, strong property clarity, and high overall data confidence, which together yield a conservative rule-based score of 6.9 and classification as a Strong Manual Review Candidate. However, the development match is No Clear Match with low confidence, so no verified development upside is included in the investment view.
Research First	FALSE	Parcel 49650-03-34-13420 at 4932 E HASKELL ST N has a bid cost of 3249.00 and is classified as a Strong Manual Review Candidate due to strong property clarity, complete address, and high extraction/data confidence, but the development match status is 'No Clear Match' with low confidence, so development is not treated as a positive signal.
Research First	FALSE	Parcel 41025-02-01-06510 at 5744 N FRANKFORT AV E has a bid cost of 3259.67 and is supported by high extraction/data confidence and strong property/address clarity, but the development match status is No Clear Match with low confidence, so it is a Strong Manual Review Candidate rather than a confirmed good investment.
Research First	FALSE	Parcel 15500-03-32-04800 at 1313 N DELAWARE AV E, Tulsa, has high data confidence, complete address, and strong property clarity, supporting the rule-based score of 6.9 and a Strong Manual Review Candidate classification. The bid cost of 3267.45 is relatively low, which, combined with clear parcel/address data, justifies deeper manual research. However, the development match is 'No Clear Match' with low confidence, so no development-driven upside is confirmed.
Research First	FALSE	Parcel 05825-03-30-01260 at 2039 N QUAKER AV E, Tulsa, has a bid cost of 3268.33 and is classified as R IMP with strong property clarity and complete address data. Rule-based scoring (6.9) and high overall data confidence support it as a strong manual review candidate. However, the development match is 'No Clear Match' with low confidence and no distance-based verification, so no development premium should be assumed.
Research First	FALSE	The rule-based score of 6.9 and category Strong Manual Review Candidate reflect a relatively attractive bid cost of 3271.21 for a residential improvement (R IMP) parcel at 868 E 52 PL N, supported by complete address quality, strong property clarity, and high overall data confidence. However, the development verification shows No Clear Match with low confidence and no distance-based confirmation, so development is not a positive factor. These mixed signals support manual review rather than an automatic buy or rejection.
Research First	FALSE	Parcel 49700-03-34-14030 at 5107 E HASKELL PL N has a bid cost of 3272.62 and is classified as R IMP with strong property clarity and complete address, but the development match status is No Clear Match and the Final Verified Development Signal is Low. Overall data and extraction confidence are High, supporting a conservative rule-based score of 6.9 and a Strong Manual Review Candidate classification rather than a confirmed investment.
Research First	FALSE	Parcel 32325-92-24-04910 at 1114 E 33 PL S in Tulsa has a bid cost of 3277.02, high extraction/data confidence, complete address, and strong property clarity, which together yield a rule-based score of 6.9 and classification as a Strong Manual Review Candidate. However, the development match is 'No Clear Match' with low confidence and no distance-based confirmation, so no development premium is justified.
Research First	FALSE	

Research First	FALSE	The parcel at 750 E 32 PL N, Tulsa (ID 17675-02-24-07570) has high data confidence, complete address, and strong property clarity, supporting the rule-based score of 6.9 and a Strong Manual Review Candidate category. The bid cost of 3310.33 is relatively low for a residential improvement type, which is a positive signal. However, the development verification shows No Clear Match with low confidence, so no external project upside is confirmed, and the ZIP is unknown, adding location uncertainty. Parcel 25500-03-29-06060 at 2625 E TECUMSEH ST N in Tulsa shows a low bid cost of 3310.33 and strong property/address clarity (R IMP, complete address) with High extraction/data confidence, but the development match status is No Clear Match with Low development confidence, so it is scored as a Strong Manual Review Candidate rather than a confirmed good investment. Parcel 44200-02-11-03380 at 4627 N BOSTON AV E, Tulsa, shows a low bid cost of 3311.00 and strong property clarity with complete address data, but the development match status is No Clear Match and the development confidence is low. Overall data and extraction confidence are high, supporting a conservative but favorable rule-based score of 6.9 that warrants manual review rather than an automatic investment decision. Parcel 17675-02-24-08030 at 3130 N HARTFORD PL E in Tulsa has high extraction/data confidence, complete address quality, and strong property clarity, supporting a solid rule-based score of 6.9. The bid cost of 3311.00 is flagged as a strong positive signal, justifying manual review. However, the development verification shows No Clear Match with low confidence and no confirmed proximity-based upside, so the property cannot be elevated to a Good Investment category based on development factors. Parcel 25375-03-29-05240 at 3215 E XYLER ST N in Tulsa has a low bid cost of 3313.80 and is classified as R HS IMP with strong property clarity and complete address data. The development match status is No Clear Match with low confidence, so no verified development upside is counted. Overall extraction and data confidence are High, supporting a rule-based score of 6.9 and a Strong Manual Review Candidate classification rather than an automatic investment decision. Parcel 90306-03-06-24020 at 1641 E 56 ST N has high extraction confidence, complete address quality, and strong property clarity for an R IMP property, with a relatively low bid cost of 3314.33. Rule-based scoring (6.9) and category Strong Manual Review Candidate indicate it merits deeper review, but the development match is No Clear Match with low confidence and distance not verified, so no development premium is justified. Parcel 44250-02-12-15190 at 549 E 54 PL N, Tulsa, has a low bid cost of 3327.00, complete address, strong property clarity, and high overall data confidence. Rule-based scoring classifies it as a Strong Manual Review Candidate with a 6.9 score. However, development verification shows no clear match and low confidence, so no development premium is assumed. Parcel 53825-02-02-01310 at 7 E 63 ST N, Tulsa, has high extraction confidence, complete address, and strong property clarity, with a relatively low bid cost of 3327.66. Rule-based scoring (6.9) classifies it as a Strong Manual Review Candidate. However, development verification shows no clear match and low confidence, so development is not a positive factor. Data confidence is high, but the ZIP is unknown and surrounding value and crime risk are unknown, keeping this in a manual-review, not automatic-investment, category. Parcel 29650-03-07-03460 at 1338 E 54 ST N, Tulsa, has a bid cost of 3327.66 and is classified as R IMP with strong property clarity, complete address, and high overall data confidence. Rule-based scoring of 6.9 designates it as a Strong Manual Review Candidate. However, development matching shows No Clear Match with low confidence, so no verified development upside is included in the assessment. The parcel at 2034 S PHOENIX AV W (Parcel ID 46465-92-11-31880) has high data confidence, complete address quality, and strong property clarity, supporting a solid rule-based score of 6.9. The bid cost of 3329.0 is flagged as a strong price signal, making it a potentially appealing low-entry-cost residential improvement opportunity. However, the development verification shows No Clear Match with low confidence, so no external development upside can be relied upon. Given the combination of strong internal signals and lack of verified development benefits, it fits best as a Strong Manual Review Candidate rather than a confirmed good investment. The parcel at 3034 W CAMERON ST N in Tulsa (Parcel ID 12175-92-03-02290) has a low bid cost of 3366.33, complete address data, strong property clarity, and high overall data confidence, which together yield a rule-based score of 6.9 and classification as a Strong Manual Review Candidate. However, development verification shows No Clear Match with low confidence, so no development premium is justified. The parcel at 4013 N ELGIN AV E, Tulsa (R IMP) has a relatively low bid cost of 3368.32 and strong property/address clarity, with high overall data confidence. Rule-based scoring (6.9) and the Strong Manual Review Candidate category indicate it merits deeper review. However, the development match is No Clear Match with low confidence, so no development premium is justified. The parcel at 813 N FLORENCE AV E, Tulsa (ID 04550-03-32-02430) has high data confidence, complete address quality, and strong property clarity, supporting a solid rule-based score of 6.9. The bid cost of 3368.99 is flagged as a strong signal, suggesting potentially favorable entry pricing. However, development verification shows No Clear Match with low confidence, so no external project-driven upside is confirmed. These factors together justify classifying it as a Strong Manual Review Candidate rather than a clear good or bad investment. Parcel 26250-92-05-02570 at 4914 W 1 ST S, Tulsa, OK shows a low bid cost of 3382.32 and is classified as R IMP with strong property clarity and a complete address, supported by high extraction/data confidence. However, the development match status is No Clear Match with low development confidence, so no verified development upside is counted despite the strong rule-based score of 6.9. Parcel 29625-02-36-21010 at 419 E NEWTON PL N (R IMP) has a low bid cost of 3388.99 and a strong rule-based score of 6.9 with high data/extraction confidence and complete address quality, but the development match status is No Clear Match with low confidence, so it is best treated as a strong manual review candidate rather than a confirmed good investment. The property at parcel 10450-03-19-50550 (3128 N TROOST PL E, Tulsa) is a residential house improvement (R HS IMP) with a relatively low bid cost of 3389.11. Rule-based scoring labels it a Strong Manual Review Candidate with strong property clarity, complete address, and high overall data confidence. However, the development verification shows No Clear Match and low confidence, so no development premium is justified. These factors support manual review but not an automatic investment classification.
Research First	FALSE	

Research First	FALSE	The parcel at 1942 S 74 AV E, Tulsa (R HS IMP) has a relatively low bid cost of 3392.99, high extraction/data confidence, complete address, and strong property clarity, which supports a solid rule-based score of 6.9 and classification as a Strong Manual Review Candidate. However, the development verification shows no clear match and low confidence, so no development premium is justified. The unknown ZIP and only medium geocode confidence add location uncertainty, keeping this from being categorized as a Good Investment at this stage.

final_key_risks	final_missing_information	final_next_due_diligence_step	final_confidence_level
ZIP is unknown; no verified development or area-based upside; physical condition and occupancy are unknown; surrounding value and crime risk are unknown despite high data confidence on the core record.	Exact ZIP code; detailed location context (neighborhood and comps); structure condition and size; current occupancy or liens beyond tax status; any confirmed nearby development or infrastructure projects.	Manually confirm the precise location and ZIP in county records or GIS, pull property card and any building details, check recent nearby sales and rents, and verify any local development or zoning changes before bidding above the minimum.	High
ZIP is unknown; no verified development linkage (No Clear Match, low development confidence); surrounding value and crime risk are both unknown; geocode confidence is only Medium, which may affect precise location and comp analysis.	Exact ZIP code; surrounding property value context; crime/safety profile; detailed property characteristics (size, condition, zoning specifics); confirmation of precise geolocation and neighborhood quality.	Manually confirm the exact location and ZIP, pull local sales and rent comps around 135 N COLUMBIA AV E, verify zoning and property characteristics for LT 24 BLK 4, and check local market and crime data before deciding whether the 3005.69 bid level is attractive.	
ZIP is unknown; no verified nearby development or project tie-in; geocode confidence only medium; development upside not verified.	Exact ZIP code; more precise neighborhood and market context; confirmation of surrounding property values and crime risk; any known local development plans or infrastructure projects.	Manually confirm the exact ZIP and neighborhood context for 2017 E 49 ST N, verify recent comparable values and basic risk indicators (including crime and vacancy), and check local planning or news sources for any unverified development or infrastructure activity near the parcel.	High
ZIP is unknown; development upside is not verified (No Clear Match, low confidence); surrounding value and crime risk are unknown.	ZIP code; surrounding property value context; crime risk; detailed property characteristics (lot size, structure condition, zoning, utilities).	Manually pull county records and mapping data for 5607 N FRANKFORT AV E to confirm ZIP, zoning, physical characteristics, and neighborhood context, and then reassess value relative to the 3021.69 bid cost.	High
ZIP is unknown; no verified development proximity or upside; only medium geocode confidence; surrounding value and crime risk are unknown.	Exact ZIP code; detailed surrounding market values; crime risk profile; property condition and occupancy; title issues or liens beyond tax status; zoning and allowable uses.	Manually confirm the precise location and ZIP for 2220 N DENVER BV W, then pull local sales/assessed values and zoning/condition data to validate whether the low bid cost of 3047.69 aligns with realistic resale or rental potential.	High
ZIP is unknown; no verified development or area-upside signal; surrounding value and crime risk are unknown.	Exact ZIP code; surrounding property value context; crime/safety profile; physical condition of improvements; occupancy status; title and lien status beyond tax auction; local market rent/sale comps.	Manually confirm the precise ZIP and neighborhood context, then pull local sales/rent comps and any available condition/occupancy data for 537 E 59 PL N to validate whether the low bid cost aligns with realistic resale or rental potential.	High
ZIP unknown; no verified nearby development; surrounding value and crime risk are both unknown, increasing uncertainty about neighborhood quality and resale/rental potential.	Exact ZIP code; clearer neighborhood context and surrounding value; crime risk; any confirmed nearby development or infrastructure projects.	Manually confirm the precise location and ZIP for 412 E UTE ST N, then check local market comps and neighborhood conditions to determine whether the low bid cost aligns with typical land or improvement values in that immediate area.	High
ZIP is unknown; development upside is not verified (No Clear Match, low confidence); surrounding value and crime risk are both unknown, increasing uncertainty around neighborhood context.	Exact ZIP code; surrounding property value context; crime risk; any confirmed nearby development projects or area improvements; on-the-ground condition and use details for this R IMP property.	Manually confirm the precise location and ZIP for 4696 N BOULDER AV W, then pull surrounding sales/value and neighborhood risk indicators to validate whether the low bid cost of 3075.02 aligns with local market conditions before considering further investment analysis.	High
ZIP is unknown; development upside is not verified (No Clear Match, low confidence); surrounding value and crime risk are unknown.	Exact ZIP code; any verified nearby development or redevelopment plans; surrounding property value context; crime and neighborhood risk indicators; more detailed legal description/lot dimensions and current use condition.	Manually confirm the full mailing/ZIP address and parcel boundaries with county records, then check local planning, zoning, and market data around 2507 N MAIN ST E to assess surrounding values and any real (but currently unverified) development or redevelopment activity.	High
ZIP is unknown, limiting precise market and comp analysis; no clear or verified development match, so upside from nearby projects is unproven; geocode confidence is only Medium, adding some location uncertainty.	Exact ZIP code; detailed neighborhood and surrounding value data; crime risk estimate; any verified development or redevelopment plans tied to this parcel or its immediate area.	Manually confirm the exact ZIP and neighborhood for 4355 N GARRISON AV E, then review local market values and any municipal or private development plans near the parcel to validate whether the low bid cost aligns with acceptable risk.	High
Unknown ZIP; no verified development match; surrounding value signal unknown; crime risk unknown; owner name listed as Unknown.	Exact ZIP code; surrounding property value context; crime risk details; confirmation of current occupancy/condition; any nearby development or infrastructure projects not captured in the current data.	Manually confirm the precise ZIP and neighborhood context for 2526 N QUAKER AV E, then pull surrounding sales/assessed values and any known local development or zoning changes to validate whether the 3115.02 bid cost is supported by area fundamentals.	High
Unknown ZIP code; no verified nearby development or project tie-in; surrounding value and crime risk are both unknown; geocode confidence only medium.	Exact ZIP code; detailed property characteristics beyond type C IMP; surrounding property value context; crime/safety profile; any confirmed nearby development or infrastructure projects.	Manually confirm the precise location and ZIP, then pull local property records and market comps around 2011 N YALE AV E to assess commercial viability and surrounding values before considering a bid at 3120.35.	High
ZIP unknown; no verified development match or distance-based upside; surrounding value and crime risk are unknown; owner listed as Unknown, which may complicate title or notification history.	Exact ZIP code; any comps or surrounding value indicators; crime risk data; confirmation of current physical condition of the residential improvement; verification of clear title and any liens beyond the tax obligation.	Manually confirm parcel details with county records (including ZIP, structure details, and any additional liens), then review neighborhood-level value and risk indicators to determine whether the low bid cost of 3123.68 aligns with acceptable risk for this residential improvement.	High
ZIP is unknown, limiting precise location and comp analysis; no verified nearby development or project to support appreciation assumptions; crime and surrounding value signals are unknown; owner name is unknown, which may complicate title or notification review.	Exact ZIP code; clearer neighborhood and surrounding value context; crime risk estimate; any verified nearby development or infrastructure projects; more detailed property characteristics beyond R IMP classification.	Manually confirm the precise location and ZIP for 543 E 59 PL N, then review local value context and any known developments or infrastructure plans before assessing maximum bid and exit strategy.	High
ZIP is unknown, limiting precise location and comp analysis; no verified development linkage or nearby project-based upside; surrounding value and crime risk are both unknown.	Exact ZIP code; surrounding property value context; crime/safety profile; property condition and improvements detail beyond R HS IMP; any local zoning or planned development information not captured in the current data.	Manually confirm the precise location and ZIP for 6105 N MAIN ST E, then pull local sales/assessed values and basic neighborhood risk indicators to validate whether the low bid cost aligns with area values before considering further investment analysis.	High
ZIP is unknown; no verified development or surrounding value signal; crime risk estimate unknown; development geocoding/match not confirmed.	Exact ZIP code; neighborhood and surrounding value context; crime/safety profile; property condition and improvements detail beyond 'R IMP'; any local development or zoning information not captured in the current data.	Manually confirm the full address including ZIP and pull local parcel records (assessor or GIS) to verify property characteristics, neighborhood context, and any nearby development or zoning changes before considering a bid at approximately 3140.35.	High
ZIP unknown; no verified nearby development or project; development match explicitly No Clear Match; commercial use specifics and condition not detailed; surrounding value and crime risk unknown.	Exact ZIP code; more precise location context (surrounding uses and values); details on the commercial improvement type and condition; confirmation of any nearby development or infrastructure projects; clearer neighborhood risk indicators.	Manually confirm the precise location and ZIP for 820 E 36 ST N, verify the nature and condition of the commercial improvements, and independently check for any nearby development or infrastructure activity that could justify the bid relative to local commercial values.	High
			High

ZIP is unknown; no verified development or surrounding value signal; crime risk is unknown; owner name is unknown; development match explicitly marked as No Clear Match with low confidence.	Exact ZIP code; any verified surrounding value or comp data; crime risk context; details on the existing residential improvement (size, condition, occupancy); clearer ownership information beyond 'Unknown'; any confirmed nearby development or infrastructure projects.	Manually confirm the precise location and ZIP for 137 W 50 PL N, verify current property condition and occupancy status for the R IMP asset, and check local market and crime context to determine whether the low bid cost of 3153.01 aligns with acceptable risk and resale or rental potential.	
ZIP is unknown; no verified development match or distance-based tie to a project; surrounding value and crime risk are unknown; owner name listed as Unknown may complicate title or research.	Exact ZIP code; any verified nearby development or infrastructure projects; surrounding property value context; crime/safety indicators; more detailed property characteristics beyond 'R IMP'; ownership/title clarity.	Manually confirm the full mailing/ZIP information and pull county records for this parcel to verify ownership, property characteristics, and neighborhood value context before considering a bid at or above 3160.35.	High
ZIP is unknown; no verified development upside (No Clear Match, low development confidence); surrounding value and crime risk are unknown; geocode confidence only Medium.	Exact ZIP code; detailed surrounding property values; crime risk data; physical condition of the improvement; confirmation of precise neighborhood context and marketability.	Manually confirm the exact parcel location and ZIP, then pull local sales/comparable values and any code/condition records for 2043 E XYLER ST N to assess realistic resale or rental potential relative to the 3183.01 bid cost.	High
ZIP is unknown, limiting neighborhood and value context; no verified development match or surrounding value signal; crime risk and area value indicators are unknown.	ZIP code; surrounding value indicators; crime risk estimate; any confirmed nearby development projects; detailed property condition and improvements.	Manually confirm the exact neighborhood/ZIP and surrounding property values, then check local records or mapping tools for condition, zoning, and any nearby development before deciding on a bid strategy.	High
ZIP is unknown; development upside is not verified; surrounding value and crime risk are unknown.	Exact ZIP code; details on surrounding property values; crime risk context; physical condition and occupancy status of the improvement; any liens or title complications beyond the tax auction.	Manually confirm the precise location and ZIP, pull local sales/assessed values for comparable residential parcels near 711 E 51 PL N, and verify title, liens, and physical condition to determine whether the low bid cost translates into acceptable risk-adjusted value.	High
ZIP is unknown; no verified development match or surrounding value signal; crime risk is unknown; development confidence is low, so potential upside from nearby projects cannot be relied upon.
